MEGA DUTY

Mega duty
For situations of extreme and continuous use. Tools and equipment that resist use more rough and prolonged.

SUPER DUTY

Extra duty
For situations of continuous use and rough applications. Products with great power capacity, performance and comfort.

HEAVY DUTY

Heavy duty
For use in situations where power in intervals are the frequent use. Products that guarantee resistance, duration and security.

INDUSTRIAL DUTY

Industrial duty
For use in situations where precision, quality and resistance are needed , products that exceed the more demanding international standards.

URREA SUPERIOR QUALITY AFFORDABLE TOOLS | SURTEK TOOLS FOR SPECIALISTS | Lock Always secure

COMMITTED
WITH INNOVATION

At Grupo Urrea we are committed to offering the safest tools on the market and keep our catalog at the forefront; that is why we have consolidated the functions of innovation and development of products, components and raw materials in our Urrea Test and Innovation Center, which in more than 700 m^2 houses laboratories dedicated to guarantee the quality of all the products that our brands show, which allows us to grant the best warranty and after market service.

All our products are endorsed by quality certification bodies worldwide, always respectful of applicable regulations and laws, based on certifications, systems of quality management as ISO 9001: 2015.

GENERAL
TEST AREA

In this area, we perform tests according to specifications of national and international standards, such as: endurance tests to traction, compression or torsion, resistance to moisture, resistance at high voltage, performance of hydraulic type bottle jacks and flexometers or metric tapes, among others.

METALURGIC
LAB

We test the compliance with specifications for raw materials and product in process, doing metallographic studies such as chemical composition of metals, hardness and analysis of the molecular structure of steels in it´s different phases.

CHEMICAL
LAB

The quality of the processes is monitored of chromed, phosphated and blued, conducting thorough analyzes of the concentrations in the different stages of these processes and validating them in an accelerated corrosion test in saline camera.

METROLOGY
LAB

It takes the metrological control of all the measurement and test equipment that are used in Grupo Urrea, carrying out calibration programs and verifications guaranteeing the reliability of the equipment and therefore the quality of products.
In addition, specialized assessments for dimensions are made with high precision and versatile equipment.

PROTOTYPING
LAB

The new products, as well as innovations,they go through a prototyping process, taking advantage of the use of 3D printers, with which it is ensured that the new developments comply with the defined functional requirements for the needs of the users in terms of efficiency, safety and durability.

PACKAGING LAB
RESISTANCE TESTS

The integrity of the products packaging is ensured through validation of resistance to vibration and oscillation, as well as resistance to external compression forces and impacts due to free fall, in addition to material composition analysis of the corrugated carton.

PRODUCT STANDARS

QUALITY POLICY

We continuously improve and innovate the processes and products to make them simpler, faster and safer and exceed the expectations of our customers, distributors, collaborators and shareholders.

Urrea received ISO 9001:1994 certification in november of 1998 and obtained its certification in ISO 9001:2000 in february of 2004, in 2010 received ISO 9001:2008 certification, and recently in 2018 obtained ISO 9001:2015 certification. This certification represents our commitment to constantly maintain the operating and manufacturing standards that have allowed us to offer our clients tools with the best combination of price, quality and ease of purchase.

THE NORMS FOR TOOLS ARE

STANDARD SPECIFICATIONS CONTAINED IN DOCUMENTS THAT DESCRIBE:

- General aspects of product design.
- General aspects of materials for manufacturing the product.
- Hardness.
- General and critical dimensions.
- Load tests (torsion, flexion, tension, cut, etc.).
- Required marks (such as an indelible markstating the country of origin).

Next we present the organizations that issue the standards that Urrea tools and equipment meet or exceed.

ANCE (Mexico)
The Certification and Standardization Association for the Electric Sector.

ASME (USA)
ASME - American Society of Mechanical Engineers.

DIN (Germany)
The German Institute for Normalization.

ANSI (USA)
The American National Standards Institute (ANSI).

Mexican Government
The Standards General Office (DGN - Dirección General de Normas) is a branch of the Secretariat of Economy (SE) of the Mexican Government.

SAE (USA)
SAE - Society of Automotive Engineers.

EMA (Mexico)
EMA certifies testing and calibration laboratories, in accordance with the Federal Bill on Metrology and Standardization, as well as with ISO-IEC-17025-IMNC-2000.
Our testing laboratories are accredited by EMA in accordance to the requirements in Mexican norm NMX-EC-17025-IMNC-2000 since October 2nd, 2003.

United States Federal Government
The General Services Administration (GSA) develops and issues Federal Standards from the United States Government.

VDE (Germany)
Germany's Association for Electrical, Electronic and Information Technologies (Verband der Elektrotechnik, Elektronik und Informationstechnik).

AFFILIATION

Grupo Urrea is affiliated to the following organizations of international prestige:

(USA)
Hand Tools Institute.

(USA)
Speciality Tools and Fasteners Distributors Association.

(Mexico)
National Association of Fabricators of Tools.

Urrea guarantees that its products are free of manufacturing and material defects (except on those where a different warranty as specified) and commits itself to replace or repair, free of charge, any tool that fails during its service life under normal use conditions, directly at the place of purchase or at any authorized distributor.

Urrea tools are designed to offer precision, quality and performance. They are manufactured by competent, experienced and highly-trained employees. Our manufacturing processes – certified by international certifying organizations – are consistent, this guarantees that we comply with the strictest specifications in all our products. Urrea has acquired sophisticated equipment and cutting-edge technology, and all products are made from the best available materials.

This is why Urrea hand tools feature a 100-year warranty:

100 YEAR WARRANTY

This warranty is subject to the following conditions:

- The tool must be identified with our permanent Urrea brand that was imprinted at the manufacturing plant.
- That the failure is the result of a manufacturing defect either in workmanship or materials, and not due to misuse or abuse.
- Urrea will be able to choose between repairing or replacing the tool that failed. The replacement or repair of the product will be made directly by the Urrea distributor.
- Urrea reserves the right not to repair or replace tools that were abused, exceeded normal use, are modified or were incorrectly used or not properly maintained.
- Some products like ratchets, torque wrenches and others that have movable parts are subject to wear and tear from normal use, so it is expected that the user will give them proper maintenance, even repair them using the spare parts shown in the Urrea tools and equipment catalog.

Urrea is not responsible for damage and accidents resulting from inadequate use, modification, abuse or use beyond the expected life span of its products.

SPECIFIC WARRANTIES.

1 YEAR WARRANTY

Torque wrenches.
Urrea torque wrenches are calibrated at the manufacturing plant and the calibration is guaranteed for one year, from the date of purchase by the end user.

In case the calibration is lost during the first year of use, showing the invoice or purchase receipt, Urrea offers re-calibration free of charge through one of its authorized repair dealers. They also offer Urrea torque wrench calibrations for a small fee after the first year of use.

Consumables.
Consumables such as bits, saws, hacksaws, knives, filters, blades, hoses and other similar items are guaranteed at the time of purchase against manufacturing or material defects that may prevent their proper use; however, they will wear out due to daily usage.

WARRANTY AGAINST MANUFACTURING DEFECTS (WORKMANSHIP AND MATERIALS).
WARRANTY VALID UNLESS A DIFFERENT WARRANTY IS STATED ON THE PACKAGING.

Urrea products are guaranteed against manufacturing defects and we will replace or repair them as long as they are used under normal conditions; this warranty will not be valid when the tool is used under conditions other than normal or when the product is modified from its original state or repaired by non-authorized individuals as defined by Urrea's service plan.

URREA TOOLS HAS MADE SIGNIFICANT

improvements in its products and has developed the following innovations.

2008 URREA GRIP SYSTEM

The UGS system (Urrea Grip System), incorporated in our combination wrenches thanks to its 3 points of contact, offers greater resistance, makes them safer, minimizes effort and does not damage the nut.

2009 URREA ASSEMBLING SYSTEM

The UAS system allows faster coupling, safe and simple with structural wrenches and high lever extensions, thanks to its conical handle that is used as alignment bar in structures and flanges. It's used in activities that require high lever without hitting.

2010 ARTICULATED HANDLES

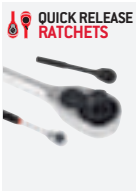

Handles feature a 180 degree rotating drive allowing you to apply torque at any given angle and spares the handle when the torque is exceeded. Phosphate head that prevents oxidation.

2011 PLASTIC TOOL BOXES

Manufactured with high-strength plastic, lid opening of 110º, the body is designed with side handles, and metal clasp closures and designed with reinforcement ribs that increases its resistance.

QUICK RELEASE RATCHETS

New head design without screws allows a change of spare parts more easily. Its 48 teeth offer 7.5º angle of recovery and a more robust mechanism. Body forged in micro-alloyed chrome-vanadium steel for greater resistance. Quick release system that facilitates the release of the accessories.

ARTILLERY AND CROSS WRENCHES WITH OPENING SURFACE®

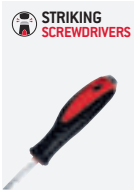

They feature a Surface® drive geometry that has a greater opening on the six corner entrance angles, creating a "floating" action that allows the wrench to adjust quickly and easily on the nut or the screw.

2012 MANUAL IMPACT HANDLES

This allows you to work with different socket measurements from 3/4" to 1" drives. To tighten and/or loosen nuts or shock based screws on impact surface. The handle has its "I" beam type body design, with greater resistance and torque transfer.

2013 STRIKING SCREWDRIVERS

They have a double treated thermal steel end blow cap attached to the screwdriver bar, this allows the maximum performance in the application of strikes. Its square bar allows the use of a wrench or pliers for more torque.

2015 UNBREAKABLE HAMMERS

The handle has rods fixed to the head and plate to eliminate the possibility that the head will be loosened or detached. Its rubber grip handle absorbs vibration and it never breaks.

2015 ANTI-VIBRATION HAMMERS

They feature an anti-vibration handle that reduces fatigue of the user and protects against possible injuries due to vibration of the blow.

HEXAGONAL BARS WITH GRIP

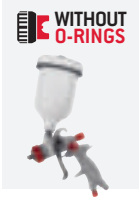

Anti-slip handles that offer better grip and better impacts. Manufactured in micro-alloy steel high manganese that doubles it life span. It has greater hardness in the chisel and tip, thanks to its heat treatment.

2016 CUSTOMIZED TRAYS FOR TOOLS

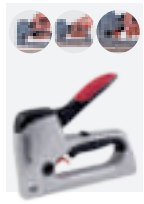

Based on trays made of EVA foam with specific cavities for each type of tool, it provides protection and improves organization.

PAINT GUNS WITHOUT O-RINGS

Allows quick and easy cleaning while reducing the need for maintenance and lengthens the lifespan.

2017 STAPLER-NAILER

With trigger shot function. Easy drop-in loading with reload indicator.

2018 CHOPPING AXES

Forged carbon steel head with PTFE coating.

2019 DUCTILE IRON PIPE WRENCHES

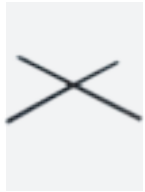

Spring jaw system for great clamping action and quick release. Teeth hardened by induction, now assembled in Mexico.

FIBERGLASS HANDLE

For all impact tools. Improves grip and impact resistance.

2020 MULTIFUNCTIONAL LUG NUG WRENCH

New 3 in 1 wrench allowing any 1/2" drive socket to be attached on both ends and. 1 end with flat spoon design for rim covers.

OPEN AND BOX END HIGH LEVER WRENCHES

With UAS (Urrea Assembling System) and sizes from 2-1/8" to 3-1/8" and 55 to 70 mm ideal for places where striking tools are not allowed. To be used with high-leverage bars.

CHISELS WITH GRIP

For intense and continue usage to provide better control and subjection. Machined head to avoid steel splinter.

2021 ERGONOMIC PLIERS

They are 4 different types: universal type, long-nose, diagonal cutting, and 4-in-1 multi-purpose plier. Their special angled head brings extrarordinary comfort and great visibility while working.

THE WINNING COMBINATION.

There will always be a set of Urrea tools designed with the perfect combination for you. Our tools and accessories make your work safer, faster and easier.

They are divided in three levels: Master, Intermediate and Basic.

- Master Tool Sets: designed for the experienced technician. It contains the most complete and balanced selection of high quality tools for heavy duty and specialty work.
- Intermediate Tool Sets: contains basic tools complemented with a wider range and depth of specialty tools.
- Basic Tool Sets: designed for the technician, it contains a selection of the most popular and most used tools.
- You´ll also find 3 ways to customize the organization of your tools through the use of trays made of EVA foam that have specific cavities for each type of tool.

These sets have the most common and popular specialized tools, validated by technicians who use them with great efficiency in their daily work.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

CUSTOMIZE YOUR OWN TOOL SET

Urrea offers **4 ways** to customize the **organization of your tools**, using trays that are made of EVA foam with cut-outs for each tool.

01 MODULAR ORGANIZATION SYSTEM

- 95 different kits.
- 3 sizes of trays are available, which can be adapted to multiple working areas. Urrea 27" cabinets can be equipped as required with 1/3, 2/3 or 3/3 trays.
- Inmediate availability.
- More than 17,000 different combinations of tools sets can be configured by drawer.

Recommended for users who can meet their needs with our available sets and require inmediate solution.

SMALL TRAY — S — 7" x 14" (1/3 of 27" cabinet's drawer)

MEDIUM TRAY — M — 14" x 14" (2/3 of 27" cabinet's drawer)

LARGE TRAY — L — 21" x 14" (one 27" cabinet's drawer)

Follow these steps to order:

1. Check available sets in our valid price list or at: **www.urreaprofessionaltools.com**
2. Contact an authorized distributor to get the price.
3. Order the selected sets.
4. Soon you will receive your sets.

02 TRAY CUSTOMIZATION WITH URREA TOOLS

Urrea helps you to create a new set that includes:

- Your selected Urrea tools.
- Customized one or more cabinets (can be optional).
- EVA foam trays.

Recommended where there are some users with same or similar functions and require the same tool content (example: auto workshop, production lines, etc).

Follow these steps to order:

1. Ask your Urrea Customer Service Representative (UCSR) for our "TRAY CUSTOMIZATION FORM".
2. Select the tool cabinet or area where tools will be stored.
3. Select the item No. required.
4. Send TRAY CUSTOMIZATION FORM to your Urrea customer service representative to receive quotation and shipment date within 48 hours.
5. Review and approve quotation and confirm your purchase order to your UCSR.
6. In maximum 10 working days you will receive the design for your approval and we will define the delivery time.
7. You will receive your sets at the defined delivery date.

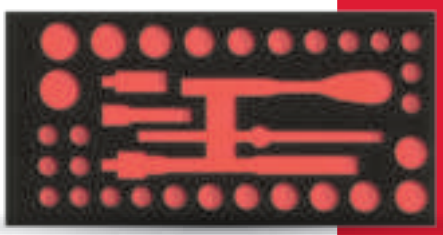

CONDITIONS

- Minimum order quantity: 1 set
- No cancellations or returns allowed once design is accepted by distributor and purchase order has been confirmed.
- Tray designs for Urrea tools only.

03 TRAY CUSTOMIZATION WITHOUT TOOLS

Urrea offers the service of customization only the trays to accommodate your Urrea tools, we adapt the trays to fit your cabinets.

Recommended for users who already have URREA tools and needs a better way to organize them avoiding additional investment.

Follow these steps to order:

1. Ask your Urrea customer service representative (UCSR) for our "TRAY CUSTOMIZATION FORM".
2. Indicate the tool cabinet or area where tools will be stored.
3. Indicate the item No. which you intend to accommodate.
4. Send TRAY CUSTOMIZATION FORM to your Urrea customer service representative to receive quotation and shipment date within 48 hours.

TRAY FEATURES

- EVA foam — Resist tears, strains and most chemicals
- 18 mm and 30 mm thickness
- Exact profile of your tools
- Double color tray
- Laminated tray (optional)
- Etching size in tray

BENEFITS

- Organized tools for the job
- Identify misplaced tools
- Protect tools of contact friction

MODULAR ORGANIZATION SYSTEM

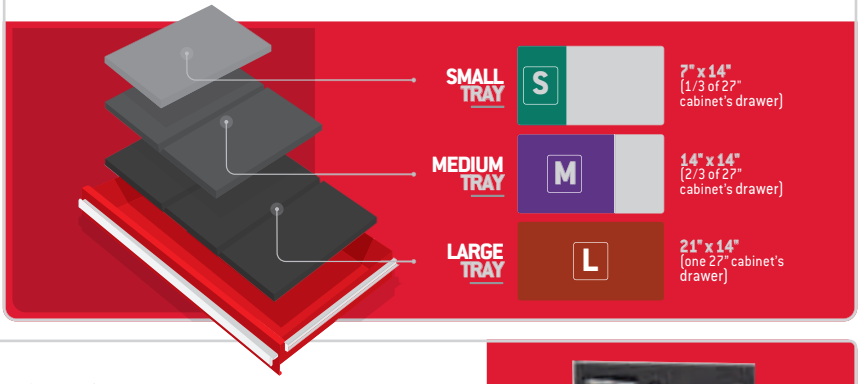

MODULAR ORGANIZATION SYSTEM

WHAT IS IT?

It is a tool organization system based in trays **made of EVA foam** that have specific inlays for each kind of tool.

3 sizes of trays are available, which can be adapted to multiple work spaces. Urrea 27" cabinets can be equipped as required with 1/3, 2/3 or 3/3 trays. Sizes available are:

BENEFITS:

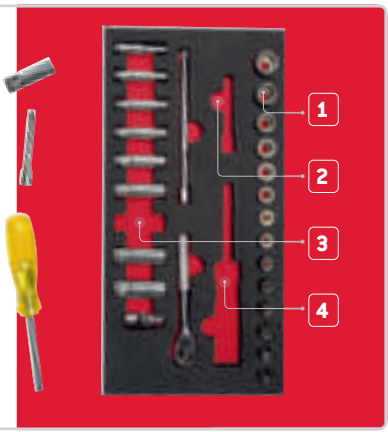

High level of control, organization and security, protects high-grade, expensive tools from damage and is ideal wherever large numbers of tools are prone to "disappear".
Each tool has a defined position, ensuring:

- Have only the necessary tools.
- Find easily and quickly the required tool.
- Identify missing or misplaced tools.
- Protect tools from constant friction.

Build cabinet drawer's with more than 17,000 different combinations of tool sets. It gives great flexibility when assembling your own cabinet as needed.

ADVANTAGES OF THE TRAY:

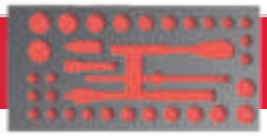

1. The inlays are made of EVA foam that are chemical-resistant and extremely flexible.
2. The sculpted cut-outs enable you to see at a glance each tools position.
3. The sculpted cut-outs for each tool are individually shaped using CNC technology to provide each tool with a secure place.
4. Easy to remove thanks to different additional recesses.

EVA - EVA OPTION

It is a 3/4" 2-layer EVA foam tray. First layer is 1/4" red color and second layer is 1/2" black color.
Product's size is engraved on each product's position for easy identification.
EVA foam resists scratches, chemicals and other industrial solvents.

EVA - LAMINATED PLASTIC COVER OPTION

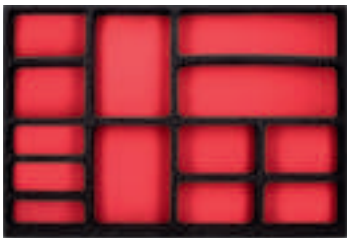

Same EVA – EVA tray reinforced with a 1/16" laminated plastic cover that brings more durability and resistance, mainly to blows.
Product's size is engraved on each product's position for easy identification.
Easy to clean.
Rounded edges to prevent injuries.

THE MAGIC OF ORGANIZATION.

Urrea's organization and storage line has the highest standards of quality, design, innovation and performance.

In this section you´ll find the largest selection of cabinets for all needs: super duty, mega duty, heavy duty, industrial, work center and integrated cabinets, as well as utility service carts, metal and plastic tool boxes, tool bags and pouches.

The main features of cabinets line are:

- Higher sheet gauges.
- Increased load capacity per drawer.
- Higher security lock with bank type key.
- Better design and more standardization within different models.
- Reinforced handles in upper cabinets.
- Reinforced handles with cushion grip coating in mobile cabinets.
- Bearing system in all drawers cabinets, from heavy duty to mega heavy duty.
- Differentiation of the heavy duty line in color black.
- Increased warranty to 4 years in cabinets for Mega Heavy-Duty Use and Heavy-Duty Use.

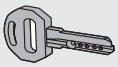

This portfolio offers the best solution for all needs of organization and storage of tools with a defined line, attractive design and greater performance.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

DURABLE, VERSATILE AND RELIABLE. WELCOME TO OUR WORLD.

There is an Urrea socket or accessory always available and ready for any challenge.

One of the most extensive lines of products with the highest quality backed by a 100-year warranty, for automotive and industrial maintenance and repair work.

The sockets that are presented in this section are called hand because they are operated by hand-held controls and manual type accessories such as ratchets, articulated handles, sliding bars and handles.

Urrea features and accessories:

- Long or short (standard) length.
- 12, 8 and 6 points.
- Measures in inches and metrics.
- Command panels of 1/4 “, 3/8”, 1/2 “, 3 / 4 “and 1” drives.

The excellent performance of the Urrea handles are due to its superior patented design.

The mouth of the sockets have a super-Drive® design that prolongs its life and does not damage the screws and nuts and bolts.

Meets National and International Standards: American and European.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

- Made of chrome vanadium steel.
- Nickel - chrome plated.
- Exceed ASME B107.110 2012 standard.
- Exceed DIN 3124 standard.
- Super Drive design reduces stress away from the fastener corners and distributing contact stresses over a large area of the socket, minimizing slippage.

HIGH IMPACT RESULTS.

With the impact sockets and accessories of this section, you will always achieve more because they must be operated by knobs and accessories that have blow action, such as impact guns, rattles and electric or pneumatic screwdrivers.

Impact sockets are used to tighten or loosen nuts, bolts and other fasteners where it is necessary to apply greater force or torque pressure than can be applied with hand accessories.

Urrea features and accessories:

- Long or short (standard) reach.
- 12, 8 and 6 points.
- In inches and metrics.

Urrea sockets have a super-Drive® design that prolongs its life and does not damage the screws and nuts and bolts.

Urrea sockets have a resistant phosphatized to finish recommended in case of FOD (foreign object detachment). It is recommended to use sockets with phosphatized finish prevent the shedding of coating particles.

Urrea products is reinforced by showing an indelible and permanent mark with the country of origin. This meets ASME / ANSE norms, as well as rules established by the federal Trade Commission in the United States.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

3/8" DRIVE 6-POINT MAGNETIC IMPACT SOCKETS.

Deep sockets feature a spring, allowing the bolt or pin to push into the socket's body while it is being screwed it.

Female drive with groove and hole so you can use a pin and o-ring when working with power tools.

A magnetic cylinder keeps the fastener engaged when it would otherwise fall out.

IMPACT ACCESSORIES

IMPACT HANDLE

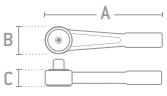

HEAVY DUTY

ZINC PHOSPHATE FINISH

10657

It can be used with all types of 3/4" square drive sockets.
Wide striking area.
Electrostatic paint to prevent corrosion.
"I" type body design allows more resistance and torque.

Spring-loaded ball drive.

Through-hole drive, o-ring and pin needed.

7470P

The impact universal joint allows you to use impact sockets in hard-to-reach areas, even letting you work at an angle up to 90°.

This tool is the link between the impact socket and the impact extension, driven by pneumatic tool (or air tool).

ALWAYS READY FOR NEW CHALLENGES.

With Urrea mechanical wrenches everything is solved, we have one of the most extensive product offerings ranging from tools that are manually activated and independent of the use of accessories, to industrial wrenches for rougher jobs that require an adjustment or higher torque pressure.

For automotive maintenance and repair work, as well as in maintenance work, repair and operation in the processing, extraction and assembly industry, metalworking, oil, construction, heavy machinery, among other.

Advantages of Urrea mechanical wrenches:

- In short (or normal) configuration, long and extra long.
- Spline, hexagonal (6 points) or double hexagon (12 points) and square.
- Combination.
- Ratchet box-end, spline, reversible and 75° reversible.
- Box-end 15 and 45 degrees.
- Flare nut wrenches
- Obstruction.
- Service wrenches.
- Available in chrome, Rubber Grip and phosphatized black finish.
- Black flat and offset striking wrenches.
- High leverage.
- Black structural adjustable.
- Measures in inches and metric system.
- Sizes from: 3/16 "to 4" and from 6 mm to 80 mm.

The open end jaws of our combination, spline and service wrenches incorporate our UGS (Urrea Grip System) created and patented by Urrea. Our Super Drive design in our mechanical wrenches ensure a more efficient and safe tool.

Avaliable in mirror polished and satin finish.

Meets with national standards and international; American and European.

FORGED FROM USA STEEL

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

RUBBER GRIP

Rubber grip

- Chrome-plated with Rubber grip

Chrome-plated

- Nickel-chrome finish to prevent rust.

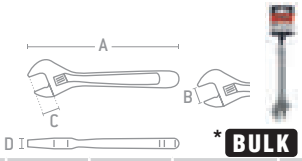

ZINC PHOSPHATE FINISH

Black

- Phosphatized finish ideal for industries where chrome particle shedding is critical.

- Rounded corners in opening avoids the concentration of pressure and better adjusts to the fastening element.
- The arrow indicates the correct turning direction.
- Extra wide opening, allowing you to work on a wide range of nuts and bolts.
- Exceed ASME B107.100 standard.

EFFECT ON WRENCH.

- If a nut or a bolt's edges are stripped, the 3-point contact distribution ensures that there is enough not contact to tighten or loosen.

EFFECT ON BOLT.

- When torque is applied, the force is distributed to three points, thus reducing stress on the nut or bolt edges.

UGS URREA GRIP SYSTEM

UGS DESING.

Urrea wrenches are manufactured under ASME B107.100 specifications and incorporate the UGS system on all open-ends. UGS system was designed and patented by Urrea, which offers the following benefits:

FULL POLISH 12-POINT SHORT COMBINATION WRENCHES.

Innovation Urrea

Modern machines are more efficient, perform better and feature technological characteristics exceeding the imagination, but they are also more compact, providing less space when the time comes to repair or maintain them. To tackle this, Urrea presents its short combination wrench line.

SHORT WRENCHES | SUPER DRIVE | UGS URREA GRIP SYSTEM

To keep your wrenches together and in order we recommend using the different organization and storage options presented in chapter 2 of this catalog.

CHROME-VANADIUM

MIRROR POLISH

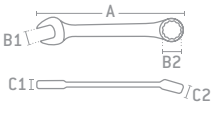

12-point box-end with 15° angle for comfortable handling.
Thin and compact end.

FULL POLISH 12 & 6-POINT COMBINATION WRENCHES.

Combination wrenches feature two same-size openings; the open-end allows you to quickly apply low torque and the box-end allows you to apply final and greater torque.

The opening angle allows two actionable positions, reducing the recovery angle to 15°.

- The openings are machined to precision for a perfect fit with nuts and bolts.
- Open-end
- 15° recovery angle.
- Thin openings for better access in narrow areas.

- Box-end
- 30° recovery angle.
- Oval handle for a more comfortable grip.

FULL POLISH FLEX HEAD WRENCHES.

180º rotation.

Lobular 12-point socket box-end.

SUPER DRIVE

Manufactured with chrome-vanadium steel with a full polish finish.

These wrenches combine a fixed open-end with 15º of inclination and a flexible socket that can rotate 180º so it allows working at any angle and it makes easier to work in hard-to reach places.

Reinforced design supports torque applied with flex socket.

- This unique design is mainly used in repairs and maintenance of refrigeration systems, where often times the nuts or couplings are made from soft materials, thus the importance of having a perfect fit, to avoid damaging the parts.
  They help tighten or loosen pipe joints made mainly with soft metals, like bronze, copper and aluminum. They have an ergonomic geometry that improves grip and fastening since their openings are precision-cut.
- Exceed ASME B107.100 standard.

Innovation Urrea

The spline design offers higher strength in a more compact profile, making it common on military and commercial aircraft.
The pecise fit between spline drive and fastener also helps prevent rounding or breaking off of fasteners edges.

SAE 12-POINT BLACK FINISH FLAT STRIKING WRENCHES

SAE BLACK FLAT STRIKE WRENCHES 12 POINT

HEAVY DUTY · INCHES · SUPER DRIVE · ZINC PHOSPHATE FINISH

12 points designed to perfectly fit the nut on the tool

The molecular structure is uniform, offering greater endurance.

When the wrench is stricken, a vibration is produced through the bolt that makes the residue keeping the bolt jammed to fall off.
In particular, the flat design on these wrenches (openings in a straight line with the wrench handle) allows it to be used in places where there is no object or obstacle in it's way.

6-POINT BLACK FINISH FLAT STRIKING WRENCHES

SAE 6-POINT BLACK FINISH FLAT STRIKING WRENCHES

HEAVY DUTY | INCHES | 6 | SUPER DRIVE | ZINC PHOSPHATE FINISH

- 6-point striking wrench, ideal for nuts with damaged edges and recommended for heavyduty work, thanks to its bigger contact surface with the nut.
- Greater maneuverability and easy access when tightening nuts or bolts in difficult areas.
- Wider striking zone.
- Exceed federal GGG-W-636E standard.

6-POINT THIN-WALL FLAT STRIKING WRENCHES.

Thin wall allows you to work on flanges when bolts are located close to each other or are very close to the pipe.

Hexagonal opening that perfectly fits hexagonal nuts, providing greater contact area.

Electrostatic painting prevents corrosion and allows you to easily identify the tool.

I-beam body gives the wrench greater endurance and torque transfer

Greater impact surface than conventional striking wrenches.

Hexagon size and nut diameter markings.

URREA ASSEMBLING SYSTEM

Urrea assembling system wrenches allow you to work in vertical and horizontal positions in hard to reach places. Their design allows them to generate optimum torque with no possibility of any type of user injury coming from the wrench, making it a very safe high-leverage wrench.

Phosphatized finish protects it against corrosion.

Extension bar provides greater leverage.

Anti-slip grip allows the user to get a better grip on this tool.

EXACTLY THE PRESSURE THAT I NEED.

Urrea has the best torque wrenches to apply the tension required in bolts and nuts, bolts and fasteners in assembled parts that must comply with a specific torque. In addition to one of the largest networks of authorized service centers that ensures their repair and proper maintenance.

Torque wrenches are offered in various styles. They come in analog or digital versions and are used in a diverse range of applications.

These applications include equipment that handles liquids or fluids, control valves, gauges, internal combustion engines, industrial pipe flanges, appliance assembly, and many other applications that require precision torque tightening.

In heavy industry, torque multipliers are used to apply high values of torque with high precision in tight places replacing lever arms and long keys.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

NEEDLE TORQUE WRENCHES

NEEDLE TORQUE WRENCHES IN-LB

SUPER DUTY

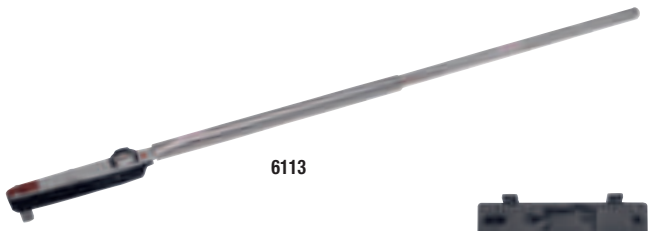

6178A

- With 1/4" and 3/8" drives, this category of torque wrenches has the capacity to measure applied torque through a needle rotating on a graduated gauge in metric as well as SAE units.
- It features a calibrated gauge in (in-lb) or (ft-lb) -(Nm) for big models and in (in-lb) - (Nm) for small models.
- Convenient wrench for measuring torque with a gauge, allowing the user to quickly and precisely identify the torque applied.

URREA IT'S ALL I NEED.

Urrea offers the largest and most versatile selection of driver tools. They include manually operated screwdrivers, hex keys, interchangeable tips and accessories.

- Bit screwdrivers.
- Bimaterial, antistatic, cushion grip, amber and R-series handles.
- Interchangeable tip screwdrivers, offset drivers and hex keys.
- Power, flat, cabinet, Phillips®, hexagonal, box, square and Torx® tips.
- Measures in inches and metric system.
- Round, square and hexagonal bars.
- Chrome and black shanks.
- Shank diameters from 3/64 " to 3/8" and 3 mm to 11 mm.

The shanks have a resistant nickel-chrome coating to avoid corrosion or with a phosphatized finish (black) to avoid the detachment of the coating.

All shanks of the Urrea screwdrivers are "demagnetized", that is, free of any magnetic force to avoid damage electrical and electronic components.

In applications where the shank is required to be magnetized, a handy magnetizer / demagnetizer is offered.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

URREA SCREWDRIVER TIP TYPES

SLOTTED, ROUND SHANK
For slotted screws. Greater torsion resistance to torsion.

SLOTTED, SQUARE SHANK
For slotted screws. Allows the use of a wrench to apply greater torque on the shank.

CABINET, ROUND SHANK
For screws located in narrow cavities.

PHILLIPS®, ROUND SHANK
For use on Phillips® head screws.

PHILLIPS®, SQUARE SHANK
For Phillips® screws. Allows the use of a wrench to apply greater torque on the shank.

PHILLIPS® PINHEAD

TORX® TIP, ROUND SHANK
Offers greater torque and less wear.

TORX® TIP TAMPER RESISTANT
For use on Torx® tamper resistant screws.
1Torx® is a registered trademark of Camcar / Textron, Inc., Rockford, Illinois, USA.

TORX® TIP NUT DRIVER, ROUND SHANK
For use on Torx® head screws.
1Torx® is a registered trademark of Camcar / Textron, Inc., Rockford, Illinois, USA.

HEXAGONAL
For use on hexagonal head screws.

BALL END HEXAGONAL
For use on hexagonal head screws.

CUSHION GRIP SCREWDRIVERS

CUSHION GRIP SCREWDRIVERS

HEAVY DUTY

CUSHION GRIP

- Featuring a cushioning grip placed over the amber handle for greater comfort, offering better grip so more torque can be applied, even when the handle comes in contact with any non-corrosive liquids.
- Cushion grip amber handle with advanced ergonomics.
- The black tip makes them suitable for the food industry and in processes where foreign object particle intrusion is critical. These screwdrivers prevent chrome particle shedding.

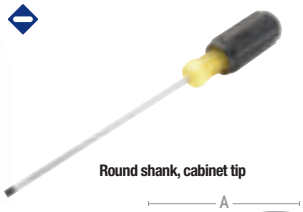

Round shank, slotted tip

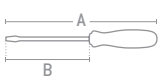

- A wrench can be used on square shank for extra torque transmission.

MAGNETIZER - DEMAGNETIZER FOR SCREWDRIVER TIPS

MAGNETIZER - DEMAGNETIZER

INDUSTRIAL DUTY

- To magnetize the screwdriver tip, insert it in the positive terminal cavity. Magnetized tips allow you to place screws in narrow areas or pick them up if they fall in. If you need to work with electronic parts requiring demagnetized tools, just insert the screwdriver tip in the negative terminal cavity.

DRIVER TOOLS

INDUSTRIAL GRADE BITS

INDUSTRIAL DUTY

- Intermediate-hardening heat treatment.
- Urrea offers hand operated bits (for screwdrivers and ratchets) and power operated bits for use on air tools.

- They feature an optimal quality-to-price ratio thanks to our tempering system and controlled manufacturing processes. Urrea guarantees uniform quality by selecting adequate materials for each one of the following applications.

ERGONIMIC T-HANDLE LONG BALL-END HEX KEYS.

Cushion grip prevents hands with oil or grease from slipping.

Phosphatized offers greater protection against corrosion.

Long hex key allows the user to reach fasteners in deep or hard to reach locations.

The T-handle permits the application of greater torque thanks to its comfortable grip.

25° to 90° entry angle for work in hard to reach areas.

BIMATERIAL HANDLE FOLDING HEX KEYS

Ergonomic design allows natural rotation of the hand and wrist. Complete 360° rotation.

Quick funnel-type entry offering perfect coupling.
Bimaterial Handle advantages:
- Ergonomic & non-slip handle design
- Light & durable handle.

Metal case advantages:
- Greater resistance and durability.
- The case can be used as support point to apply greater torque.

Exceed ASME B18.3 & ISO 2936L Standards.

THE PERFECT MATCH: DESIGN AND ERGONOMIC.

Urrea pliers and cutters are used for everything: hold, extract, twist, bend, and even cut various materials.

Both have in common a union that serves as a lever point to multiply the applied force.

There are several types of pliers for different industrial areas:

- Electronics and telecommunications pliers, with different head designs, drive mechanisms, with different angled drive mechanisms, with different angled cuts for work with cuts for work with cards and electronic components.
- Electrician's pliers, with designs adapted to the diverse needs for handling and repairs in electrical installations.
- Clamping pliers, due to their unique mechanism IT allows you to develop work with great precision and safety, allowing your free hands to perform other tasks.
- Mobile or adjustable union pliers have a wide range of applications in mechanics, plumbing and general use.
- Retaining ring pliers, with their variants, depending on their length, shape, angels of the tips and mechanisms of drive, are very useful in the industrial and automotive sector.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

STRENGHT AND ACCURATE HITS.

At Urrea I always find what I'm looking for.

With the striking and struck tools I have what I need for each type of use:

Direct striking tools (hammers and mallets) and indirect striking tools (chisels, punches and drift pins).

Together they are very useful in industrial applications (machinery, assembly lines, maintenance) and for automotive service (engines, body, tires).

Struck tools include those used for cutting or breaking materials, in addition to the traditional hammer of mechanic or ball, hammers hammers wich are designed to keep parts free of damage, deformaty or marks subjected to blows.

The type of meterials forged into these hammers are the bronze, aluminum bronze, plastic or rubber.

There are also hammers designed specifically for the service of automotive laminate whose geometries allow coupling with the shapes of the bodies of cars.

Among the tools that transmit blows are those designed to cut break and mark meterials mark, those used to assist in the centering of bits and those used to install or remove bolts and rivets, in the latter are made of steel and bronze when the materials are not required to be marked or damaged.

This section also presents the punching tools, tools useful for drilling or making rubber washers or any material used for packaging, and alignment or disassembly of machinery elements.

They meet National and International, American and European standards.

The quality image of these products is reinforced by the indelible and permanent mark showing the country of origin. This mark meets standards set by the FEDERAL TRADE COMMISSION in the United States.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

COLD CUT CHISELS

HEAVY DUTY

- Designed to remove, cut or break materials with a hardness softer than the chisel's, such as concrete, rock, slag, brass, untreated steel, nuts, bolts, pins, etc. It is widely used in the construction industry, as well as in the installation and maintenance of fixed equipment and piping in the chemical and food industries. The tip's width dictates the chisel's uses, depending on the accuracy or brute force required.
- The tool's butt end is designed to withstand strikes.
- Tip wider than body.
- Designed to remove cold materials like iron, brass, bronze and steel.

ALIGNMENT BARS

- There is a great variety of alignment bars for different purposes. They can be used to align, adjust, move or disassemble metal or wood pieces.
- The angled chisel tip allows greater leverage when used to remove wooden seals or machinery elements.
- Great tool for creating leverage, for aligning or for positioning mechanical parts or pipe flanges.

KEEPING YOU SAFE.

Urrea non-sparking tools are the ideal tool for use in applications in explosive potential environments.

All tools are forged with a bronze-aluminum alloy which allows them to meet the characteristics needed for their performance, without causing sparks.

Bronze-aluminum alloy means that these tools do not have the hardness of the tools manufactured with alloyed steels, so you should avoid subjecting them to overstrain and keeping them away from high temperatures.

The use of the non-sparking tool should complement other preventive measures.

Other objects such as clothing, footwear, face material must also comply with non-sparking specifications.

CAUTION: THESE TOOLS ARE NOT CLASSIFIED AS ANTISTATIC BECAUSE THEY ARE ELECTRICALLY CONDUCTIVE. DO NOT USE TOOLS CONTAINING COPPER IN DIRECT CONTACT WITH ACETYLENE DUE TO THE POSSIBLE FORMATION OF EXPLOSIVE ACEMILITE IN THE PRESENCE OF MOISTURE.

Main fields of application: In the petrochemical and similar industries, mining, chemical, paper, pyrotechnic, military, aerospace as well as in the manufacture of weapons and ammunition, paints, alcohol processing, plastics, etc.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

ALWAYS PROTECTED.

With Urrea insulated tools you are always protected, as they are designed and certified to work safely in activities and operations where there is contact risk with live electrical parts up to 1000V (AC) or 1500V (DC).

Main fields of application:

- Electrical installers,
- Electric power stations,
- Electric substations and substations,
- Low voltage networks,
- Lighting installation and repair,
- High voltage networks,
- Firefighters- telecommunications,
- Chemical industry, among others.

- Never use the tool in applications under tension if the protection has damage, cracks, embedded elements
- Avoid contact with water while performing live work
- Do not directly touch any part that may be under tension
- Use a voltage tester
- It is recommended to use insulating floors and safety footwear in work under tension.

The 1000 V screwdrivers meet the specifications of the Association of German Electricians (VDE).

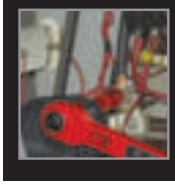

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

INSULATED TOOLS

1000 V SOCKET SETS WITH ACCESSORIES.

Urruea insulated tools are designed and certified to work safely in activities and operations where there is a risk of contact with live electrical parts up to 1000 V (AC) or 1500 V (DC).

Double cover insulation, red over yellow, as soon as the outer coating is scratched or damage the underneath contrast coating gives an optical signal that this tool is no longer qualified for working on live wires.

Extended cover to guarantee safe assemblies.

REVERSIBLE RATCHETING

1000 V TRIMATERIAL SCREWDRIVERS

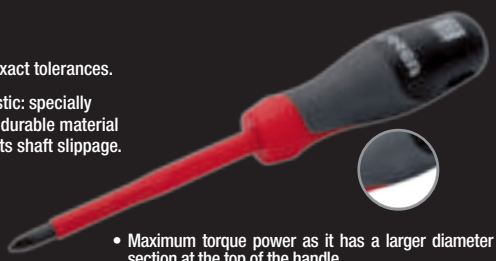

TRIMATERIAL SCREWDRIVERS

TRIMATERIAL HANDLE

Tip machined with exact tolerances.

DIN ISO Standard

Red PP plastic: specially formulated durable material that prevents shaft slippage.

Gray soft TPE material Specially formulated for better transmission of torque.

- Maximum torque power as it has a larger diameter section at the top of the handle.
- Molded and injected handle on the shaft for strength and durability.
- Black PP plastic: reinforced material specially formulated impact-resistant and low temperatures resistant.

THE MOST EXTENSIVE VARIETY.

I guarantee my plumbing professional works with the extensive program of Urrea pipe tools, with the highest quality. The most extensive variety of tools for carrying out installations with great precision and speed, tools specially designed for cutting and countersinking, threading, bending, clamping and handling copper, aluminum, steel and stainless steel pipes.

They are ideal for installation, repair or maintenance work on compressed air, gas, water and oil installations, pumping systems, electrical installations, refrigeration and air conditioning systems, and in general for the installation, maintenance and service of any pipeline.

In any work with tubes, Urrea tools are recognized for their guarantee of quality, durability and ease use. Each Urrea tool is specially designed to provide extraordinary service in tough jobs.

There are also specialty tube tools, for placing or removing plastic or glass tubes, or for working in corners, with tools that provide a quick and strong fixing in difficult positions.

They comply with national and international, American and European standards.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

REVERSIBLE CHAIN WRENCH

REVERSIBLE CHAIN WRENCH

HEAVY DUTY

- An indispensable tool to handle industrial and commercial piping. Urrea chain pipe wrenches fasten quickly and strongly in the most difficult positions. In addition, they are designed to offer extra leverage for the roughest work and for large diameter pipes. The two jaws can be inverted for even more efficient fastening from either side.
- This wrench fastens quickly in difficult positions, such as pipes very close to each other, in a ditch or gutter.

THE BEST PERFORMANCE GUARANTEED.

Urrea has the best tools designed for the removal of parts that since their installation are inserted under pressure.

Urrea's pullers have a threaded stud, straight jaws, internal and external, fixed, adjustable, reversible, which are forged for greater resistance.

The extractors are particularly useful in applications where the elements are under pressure or whose operating conditions require pulleys, bearings, bushings or any power transmitting device, such as in automobile engines, internal parts of machinery, structures, industrial installations and similar applications.

This makes the Urrea pullers an indispensable tool in the automotive industry and service.

There are also specialty pullers, mainly in the automotive service, to place or remove pulleys, gears and pit man arms from the directions of the cars, bearings, bushings, among others.

The extractors that are presented in this chapter are called extraction tools because they are designed to remove parts that, by their operation, are assembled under pressure, there are various materials and sizes, such as straight jaw pullers, reverse pullers, adjustable extractors, flywheel extractors, reversible extractors, bearing separators and more.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

WITH URREA IS ALWAYS EASIER.

Urrea vises and c-clamps give me the power I need to hold one or more elements efficiently while undergoing different mechanical operations such as sawing, drilling, milling, filing or marking.

It is essential to have the best tool in the manufacturing of any iron product or any other material that has to be fastened to work it.

The vises and c-clamps presented in this chapter are of different materials and sizes, such as the bench vises that are usually bolted on a table or workbench, or bolted to the bumper of a work truck.

They meets national and international standards, American and European.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

MAKE IT EASIER, FASTER AND SAFER.

With the automotive tools you have the right tool to perform more quickly and efficiently maintenance and repair of automotive vehicles and trucks.

With the increasing complexity of automotive vehicles, where the efficiency, speed, precision, quality and safety are increasingly demanded in automotive repair and maintenance service, the need for special tools, safe and guaranteed, which you can rely on fully, is becoming more and more latent.

Automotive tools Urrea are designed for the repair and maintenance of engines, suspension, brakes, tires, filters, electrical system, bearings of automotive vehicles.

The offer of automotive tools Urrea also covers tools for inspection, testing and adjustment and calibration ores. Los main benefits of having special tool for maintenance and automotive repair are: Perform work safely, quickly and accurately.

A greater reach and penetration in places where space is limited and difficult to access. They facilitate the adjustment or replacement of parts or systems.

Take readings and make diagnoses more quickly and accurately.

They comply with national and international American and European standards.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

AIR HOSE REEL

AIR HOSE REEL

INDUSTRIAL DUTY

- Maximizes its useful life:
- Storing the hose in a reel prevents people from stepping on it or equipment from squashing it, thus prolengthing its life.
- Increases productivity:
- Easier to handle the air hose, making it easier to find and use, saving time and money.
- Minimizes leaks spills:
- The use of reels prevents spills and air leaks, thus reducing costs.
- Improves safety:
- Air hose reels help keep shops organized, preventing accidents or injuries.

LESS EFFORT, MORE POWER.

Urrea hydraulic equipment gives me the power to do the job easier.

This product falls into the jacks, bottle jacks, hydraulic bench presses, shop crains and Hydraulic Body Frame Repair kits family (also call "Porto Power").

These equipments are essential in maintenance, assembly and disassembly operations, repairs of machinery and structures of all kinds, they are also ideal for automotive laminate and metal-mechanical production workshops.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

USE AND PRECAUTIONS FOR LIFTS

USES AND PRECAUTIONS OF LIFTS INITIAL MANAGEMENT:

- **Verify that the oil level is optimal before attempting to lift any load.**
- **It is possible that during transport, air has accumulated inside the hydraulic system, to purge it and that operation is optimal, the following recommendations should be followed:**

1. Open the purge or relief valve.
2. Pump the lever repeatedly to achieve lubrication throughout the system and the accumulated air outlet.
3. Close the relief valve.

PRECAUTIONS:

HEAVY DUTY CAST IRON SUPPORTS PAGE 240

- Do not exceed the max capacity.
- Use additional safety suport.
- Use chocks if appropriate.
- Only be used on a solid level surface.
- Use oil HL or HM.
- Repair by qualified persons.

- The maximum stroke of the jack indicated on the label should never be exceeded.
- Do not attempt to move jack when it is in use.
- Always use hydraulic floor jack for lifting only.
- Position the jack under the manufacturer's recommended lifting point for the vehicle.

THE STRENGHT YOU NEED.

Urrea's cargo handling equipment gives me the strength I need in applications where you have to lift, support and transport loads for long periods of time safely and with minimal effort.

In general, this type of equipment is driven by manual mechanism to transmit power such as hoists, which move loads of up to 10 tons, supplemented with slings that adapt to loads due to their flexibility to keep them safe during movement.

The cargo handling equipment in this chapter are indispensable in assembly and disassembly operations, ideal for workshops of metal-mechanical production.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

HIGHER LEVEL SOLUTIONS.

Urrea products are developed with the most advanced technology to offer you measurement, leveling, marking, checking and diagnosis, with accuracy in the measurements, speed in response and versatility in use.

The borescope is a probe with a small video camera, used mainly by electricians, security personnel, specialists from all professional sectors, mechanical and electronic, precision mechanics or automobile mechanics.

Digital multimeters carry out standard electrical tests in ac and dc circuits including frequencies, frequency cycles, wave amplitude, digital voltage readings, amperage and resistance of any system or components and conductors.

The automotive digital multimeters can be used as very efficient fault diagnosis tools for most of the problems with the current sophisticated automotive electronic systems.

The digital hook multimeters are designed to extend the measurement of current in ac and dc circuits, high power and in the outputs or derivations of transformers, capacitors, rectifiers, transmission lines, drivers of substations.

The line of infrared thermometers is ideal in mro applications, electrical maintenance, automotive repair and maintenance, manufacturing processes, food industry, maintenance of air conditioners and any application where it is required to monitor the temperature.

We also have flexometers, long tapes , odometer, distance meter, levels, strip lines, squares and compasses, as well as micrometers and vernier calipers.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

DIGITAL MULTIMETERS

COMPACT DIGITAL MULTIMETERS

INDUSTRIAL DUTY

Features	
DC voltage	600 DCV
AC voltage	600 ACV
Resistance	200 Ω
AC amperage	N/A
DC amperage	N/A
Range	N/A

- Basic model.
- Continuity tone.
- Comes with a shock-absorbing cover for protection, featuring a flip out stand.

ITEM	BATTERY		
UD12	9 V	1	

INDUSTRIAL DUTY — IMPROVED PRODUCT

Features	
DC voltage	1,000 DCV
AC voltage	1,000 ACV
Resistance	0.1 Ω - 40 MΩ
AC amperage	0.5µA - 2,000µA AC
DC amperage	0.2µA - 2,000µA DC
Range	Autoranging

- Min/max indicator.
- Hold read fuction.
- Rubber holster.
- Integrated kickstand.
- Automatic power-off function.

THE HIGHER POWER, THE LESS EFFORT.

Urrea pneumatic tools offer:

- Greater power with less effort: the impact mechanism is the one that does the work, the weight of the tool is less as it contains fewer components.
- Higher speed: the compressed air can drive the tool at high speed.
- Greater security: unlike manuals tools, you don't need to make effort with your body to apply leverage when you require a higher torque.
- Better operation: variable speed control, instant start, reversibility and stop without internal control elements.
- Longer continuous use time. Pneumatic motors do not get as hot as electric motors.

They provide more power and higher torque than many power tools.

Their strength and speed is continuous (air flow and pressure can be easily controlled).

They work in humid environments because the filters remove a large part of the water in the air and can be installed in areas where there are explosion hazards such as mining or chemical installations or with electromagnetic fields.

Pneumatic tools have different mechanisms.

Urrea has 3 large groups, which are: simple mechanism, demolition mechanism and impact mechanism.

These mechanisms are selected depending on the purpose or torque in which the tool will be used.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

ACCURACY AND CONTROL EVERYWHERE.

These accessories, are used with stationary and portable machines, tools and equipment, and they are intended to work on different types of materials.

- Masonry bits with straight shanks, SDS plus and SDS max.
- Drill bits for metals in their different materials such as cobalt, premium and high speed steel, with measures in inches, metric, numerical and alphabetical gauges, and straight, low and tapered shank designs.
- Special bits such as center bits and step bits.
- Woodworking bits such as router bits, flat bits, worm bits and punches.
- Vertical cutters, woodruf cutters, and burins both square as round ideal for workshop machines lathes and milling machines.
- High speed taps in sets and single packed, bimetallic hole saws, ideal for drilling large diameters in different types of materials.
- Discs for ceramic cuts, wood cuts, and abrasives for cutting and grinding metals and stones.
- Rough and side stones of different shapes and materials like silicon carbide, gray aluminum oxide and White.
- Mounted tips of various sizes and shapes, ideal to work with mototool in roughing jobs no and detailed in dies, molds, etc.
- Corrugated and twisted wire cards, circular and cup type, to finish, remove rust, paint, residue, remove burrs and polish rough surfaces.
- Files and burs with the most usual designs, flat, half round, round, triangular and bastard and fine finishes.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

SDS PLUS PREMIUM CONCRETE DRILL BITS

SUPER DUTY — SDS PLUS

BSDSP1/4X4

You can drill: Concrete, Stone, Brick, Concrete with rod

- Bits for hammer drills manufactures with a special coating that supports the SDS plus bits. Its 3 cutting edges are unique—they create perfectly round holes when drilling, as well as optimal impact and rotation energy transfer from the drill hammer.
- URREA's SDS plus premium drill bit can create up to 1,500 perforations, in contrast with traditional bits at only 300.
- 3 cutting edges ensure perfectly round perforations. They are resistant to rod cutting.

SDS PLUS CONCRETE DRILL BITS

SDS PLUS CONCRETE DRILL BITS

SUPER DUTY — SDS PLUS

You can drill: Concrete, Stone, Brick

BSDS3/16X6

- 30% faster.
- Longer useful life.
- Greater precision.
- Reduces slippage.

- The tungsten carbide tip with two cutting edges combines a large strike area and impact concentration to obtain a better percussion effect. 2-flute design with square grooves combines a compression and vacuum chamber that accelerates swarf removal, making it 30% faster than any conventional drill bit with a straight shank.

- Thin carbide tip penetrates material more easily.
- These drill bits are for use on hammer drills fitted with an SDS plus chuck. Urrea's SDS plus drill bits are ideal for use in solid and dry concrete. They are completely tempered to endure high torque, flexion and pressure.

STRAIGHT SHANK CONCRETE DRILL BITS

STRAIGHT SHANK CONCRETE DRILL BITS

INDUSTRIAL DUTY

BCN386

You can drill: Concrete | Stone | Brick

- Rolled and blasting steel that provides a perfect surface finish and corrosion resistance. Heat treatment that increases abrasion resistance, reduces adherence of burrs and ensures the verticality of the drill bit.
- Ideal for working in concrete, stone and masonry.
- Tungsten carbide pill which increases the speed up to 20%.

Sanblasted finish.

- Premium drill bits are treated at 1,196°C and nitro-carburized at 510°C which yields a hardness much greater than high speed steel. They are more resistant to the heat generated during drilling, which prevents the bit from deforming. They are highly recommended for drilling on high hardness steels such as stainless steel. Made of high moly steel featuring a 135° split point so the user can quickly and accurately drill without having to punch the spot first.
- They combine the double protection of great lubrication obtained by black oxide coating found on HSS drill bits with nitride's abrasion resistance. This combination makes them ideal for drilling steels in general, and non-ferrous and non-metallic materials such as plastics, woods, rubbers, etc.

- 3-face shank prevents slippage.
- Treated at 1,196°C.
- Nitro-carburized at 510°C
- 135° split point.
- For drilling high hardness steels such as stainless steel.
- Higher hardness than high speed steel.

- They have nitro-carburized edges which can withstand very high temperatures when drilling, keeping the bit sharp, longer. The golden areas of the body have a nitride coating that provides maximum lubrication. The 1/2" reduced shank with 3 faces allows stronger fastening for heavy work. These drill bits are also known as silver & deming.
- 135° split point.
- Recommended for heavy duty work.

COBALT HIGH SPEED STEEL STRAIGHT SHANK DRILL BITS

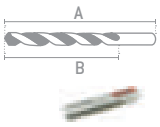

HEAVY DUTY — M35 STEEL

To drill	Steel	Stainless steel	Casting steel	Iron	Titanium	Aluminum	Magnesium	Bronze	Copper	Brass	Regular steel sheet	Construction rod	Wood	Acrylic sheet	Plastics

BC1/4

- 6% cobalt.
- Yields 45% more than the general use drill bits.
- These durable drill bits have a gold finish and 135° SPLIT POINT tips that drill faster and more accurately on high hardness materials such as stainless steel, castings, aluminum, copper, tin, high temperature alloys, titanium, and some plastics.
- Cobalt's tremendous hardness allows the user to work at speeds up to 30% faster than with conventional high speed bits. They drill without causing percussion in any type of material.

BLACK OXIDE HIGH SPEED STEEL STRAIGHT SHANK DRILL BITS

- These drill bits are designed to be used in a wide variety of materials, from soft metals to the strongest. They feature a 118° split point and are heat treated to increase wear resistance. This is the ideal bit for general purpose use in materials with low to medium hardness ratings, in any type of industry.
- Manufactured in high speed steel M2, which due to its characteristics is steel of greater rigidity that increases the life of the cutting edge and favors high production works.

- Their tapered shank provides strong fastening that prevents the drill bit from slipping when the user begins drilling. They are available with diameters of 1/2" up to 2", for precise drilling. Compatible with stationary drills and lathes, conventional and numerical control . For work in a wide variety of materials with low to medium hardness.
- They offer the best option for work requiring extreme drilling accuracy.
- The tapered shank provides greater stability when drilling with stationary drills and/or numerical control.

INDUSTRIAL DUTY

M1 STEEL

BGB3/4

- To drill: aluminum, copper, brass, zinc, iron and non-alloy steel.
- erforation with precision, without displacement.
- Durability and resistance due to its conical tip.
- Two flutes design allow smoother bore.
- Its structure prevents chips from being trapped reducing the cutting strength.

STEP DRILL BITS

3-FLAT SHANK STEP DRILL BITS

INDUSTRIAL DUTY

- Urrea's 2-flute step drill bits allow the user to make exact and clean cut holes; the surface goes through a special treatment that facilitates drilling. They have multiple diameters and 3-flat shank providing stronger attachment into the tool, which prevents the bit from slipping.
- They can be used in materials such as: plastics, rigid or thin materials, plexiglass, wood, and composite materials with a thickness equal to or less than the bit's stepped increments.

CENTER DRILL AND COUNTERSINK BITS

CENTER DRILL AND COUNTERSINK BITS

HEAVY DUTY

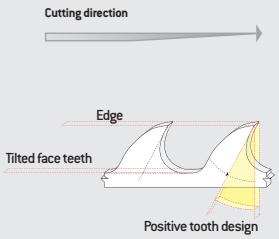

- Made with high speed steel for increased performance. Fluted design prolongs the tool's life and improves its drilling quality. They combine precision and accuracy, eliminating the margin of error caused by the tool's flexion. Bell-shaped tip creates burr-free holes by drilling and flaring at the same time. Used for creating centering points or axis guides, sphere, or plate guides in materials such as stainless steel, casts, bronze, and copper, among others.
- Right hand helix and cutting edge with excellent swarf removal.
- 118° split point performs better as starter bit in materials such as stainless steel, casts, bronze, and copper.

BIMETAL HOLE SAWS

POSITIVE TOOTH DESIGN

Requires less speed, achieves more depth of cut.
Positive tooth design provides better chip clearence as teeth cut into wood, plastic or any machinable steel.

BIMETAL

M3 HSS CUTTING EDGE

For use in cutting holes for pipe and tubing instalations as well as door lock instalations electrical conduit, hoses & antennas.
Teeth stay sharper to make smoother cuts.

HIGH SPEED STEEL TAPS

- High speed steel screw taps have cutting edges along the tool, allowing it to create threading at high speeds with quick cuts and less torque, making exact pieces that perform better. Precision thread that deliver accurate results and better performance The screw tap is a tool used to create or restore internal threading. There is a wide range of designs for different uses, depending on whether a blind or open thread is needed.
- Taper screw taps are meant for creating new thread from scratch, while non-tapered versions are used for repairing existing threads.

ROUGHING END MILLS

ROUGHING END MILLS

SUPER DUTY

M42 STEEL

- Roughing end mills, are designed to remove large amounts of metal quickly and more efficiently than standard end mills. Coarse tooth roughing end mills remove large chips for heavy cuts, deep slotting and rapid stock removal on low to medium carbon steel and alloy steel prior to a finishing application. Fine tooth roughing end mills remove less material but the pressure is distributed over many more teeth, for longer tool life and a smoother finish.
- Shank with safety notch prevents slippage.
- Made of high speed steel M42 with 8% of cobalt. Recommended to be used on low-hardness steel <31.6 HRC and alluminum and cooper alloys.
- 3, 4 and 5 flutes to remove metal quickly and with a smooth finishing.

FINISHING END MILLS

FINISHING END MILLS

SUPER DUTY

M42 STEEL

- Finishing end mills are used in metalworking applications for removing material or burrs from a workpiece and leaving behind a smooth finish. Finishing end mills are used for center cutting (plunge cut) operation and when chip removal in slots & grooves is a problem.
- Made of high speed steel M42 with 8% of cobalt. Recommended to be used on low-hardness steel <31.6 HRC and alluminum and cooper alloys.
- 4 flutes to remove metal quickly and with a smooth finishing.
- Straight front cutter.
- Helix angle of 30°.
- Safety notched shank to prevent slipping in the tool holder.

- Center cutters.
- Also known as ball nose end mills.

- End mills with round tips, feature 4 flutes with center cutters that are designed for trace milling, CNC machines, fillet milling and other purposes requiring a concave circular surface. Made of HSS 1320 steel with 8% cobalt. Recommended for use on low hardness steels and materials such as aluminum and bronze.
- Shank with safety notch prevents slippage.
- 4-flute design provides better swarf removal and finer finish.

LATHE TOOL BITS

LATHE TOOL BITS

SUPER DUTY

- Lathe tool bits are made of high speed steel so they can be used for work in mild steel and soft materials like aluminum, bronze and copper, among others. They are ideal for grinding, cutting, facing, etc, depending on the type of cutting bit attached to the tool.
- Cobalt provides adequate hardness and strength, improving cutting performance. Square tool bits can be used in all materials and also for extra-duty applications requiring deeper cuts.
- Compatible with conventional cutting tools such as lathes, profiling machines and planers.

ABRASIVE WHEELS.

Abrasion refers to the removal of particles from an object by means of friction against another material, usually harder than the object, so it can be shaped or sharpened as desired.

The most common abrasive materials are aluminum oxide and silicon carbide.

Abrasive wheel materials:

Aluminum oxide

ALUMINUM OXIDE

It has a brown color. It is a very strong, synthetic material known for its enormous cutting resilience, even at high speeds. Aluminum oxide has the widest range of applications among abrasive minerals. It is the strongest grain, has a long life, and its properties allow quick cuts. It is mostly recommended for metallic applications.

Silicon carbide

SILICON CARBIDE

It has a shiny black color. It is very sharp and practically as hard as diamond yet as fragile as crystal. It breaks up in smaller cutting grains during use. It is recommended for use in very difficult or soft materials. People prefer this material when working with materials such as marble, granite, brick and non-ferrous metals.

PINK ALUMINUM OXIDE MOUNTED STONE BITS

Mounted stone bits are small solid abrasives that come in different sizes and shapes, mounted on a steel shank. They can be used with air or power handheld tools with a straight spindle. They are used in die-stampers, for deburring cast pieces, retouching holes, etc. Also used for finishing interiors when the diameter is very small. They have high purity (99.8%). The fact that they grind cold allows them to be used for grinding tempered steels, vanadium, nickel and molybdenum.

MAXIMIZE YOUR LUBRICATION PRODUCTIVITY.

Urrea offers a complete solution in equipment, tools and accessories for handling oil, grease and other fluids required throughout the industry in general.

These products will allow the user to work more safely and efficiently while adding different oils or fluids to Urrea pumps and dispensers.

These products are generally used in multiple sectors such as agriculture, mining, food industry, automotive industry, processing industry, construction industry, among others. In this section you will find extractor pumps manufactured in different types of materials that allow us to work with virtually all types of fluids, such as corrosive liquids, solvents, acids, detergents, among others.

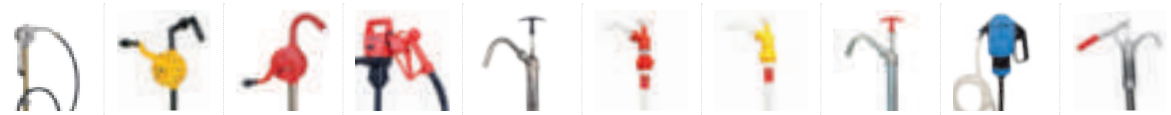

They can be adapted to multiple containers, such as drums, buckets or even have their own container to facilitate their movement to the work area. Including manual, pneumatic and battery-operated grease injectors to meet occasional maintenance work to continuous lubrication work.

Wide selection allows the user to select the best option according to their requirements, both performance and ergonomically. You also find various accessories to complement the use of equipment and tools and can adapt them to more specific uses. The commitment of all Urrea products for the management of oil, grease and other fluids is to make it easier, faster and safer for the user during work.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

ALWAYS READY TO USE.

Everything I need to complete my workshop with the highest quality, performance, durability and ease of use.

The knife designs cover the most complete range of utility such as straight utility knife, curve and safety; in addition to the sectioned blade that includes an automatic change mechanism.

The arches for blades that are offered in this section range from the light arches for fine works to the heavy blades ideal for working with metal where the weight of the arc is a factor.

You will also find ergonomic, high tension arches, fixed arches as well as adjustable arches. The complement of the arches are the bimetallic segments, flexible to avoid ruptures and at the same time resistant to tension.

The LED flashlights for heavy use that Urrea puts at your disposal, produce a beam of ultra brilliant light. They are resistant to impacts due to its aluminum body with neoprene protection and is resistant to all types of weather.

In this section you can also find various products such as riveters, hacksaws, head lamps and paint brushes, and for emergency repairs there are self-fusing silicone tapes and fiberglass tapes.

We are constantly improving our products, that is why the information, characteristics and availability of them can change without prior notice.

CORRECT WAY TO WEAR YOUR SUPPORT BELT

It is important to wear shoulder strap-back support belt when you are working lifting heavy objects. If you don't use it correctly, it may increase the possibilities of back and abdominal injuries.

Take both sides of your belt and adjust them until they both cross the front side in front of your stomach. Make the same with your external belt-straps until you feel them adjustable. Re-adjust your belt until it feels comfortable.

The lumbar protection belt is not a personal safety device, it is an element that forces you not to bend your back when you lift any heavy object and bend at the knees for proper lift and avoid possible injury risk. When you are not lifting heavy items, loosen the belt, then re-tighten before lifting again.

WHICH SIZE DO I NEED TO WEAR?

Measure your waist from the widest section (belly button position).
Use the chart below to select you size:

SIZE	USA
SMALL	28"- 31"
MEDIUM	32"- 34"
LARGE	35"- 37"
EXTRA LARGE	38"- 40"

USE AND MAINTENANCE OF FOOTWEAR.

The product you have purchased exceeds the highest quality standards.
To increase the lifetime of your safety boots, we recommend:

Know the risks in your workplace, situations such as falling objects, twisting, drilling, electrical, slips, moisture, chemicals products, among others, should be considered for the acquisition of appropiate footwear.

If you experience a severe blow on the toe cap, consult with your supervisor. We recommend replacing the safety boot. The boot has met its primary objective (protect your foot).

Some situations are not considered manufacturing defects, for that reason the warranty will be void in any below cases:

- Damage by cuts or scrapes.
- Use in areas that are too wet.
- Welding burns or any other agents.
- Exaggerated use on the soles, exposed to too much abrasion which may cause loss of the design, or by dragging your feet.

Maintenance:

1. Clean with a wet cloth and water, never sue solvents.
2. Let it dry in the shade, no direct sunlight.
3. Use grease or oil for leather
4. Clean the sole with water only, never use solvents.
